PRD: Shiftswap (MVP prototype)

Owner: Product team · Status: Draft for prototype

1. Overview

Shiftswap lets hospital nurses trade shifts with colleagues without calling the ward office, and lets ward managers approve swaps in one place.

2. Problem

Swaps happen today over WhatsApp and paper forms. Managers find out late, approve swaps that break overtime rules, and nurses never know whether a swap is confirmed.

3. Goal of this prototype

Validate with 5 nurses and 2 ward managers (St. Mary's pilot) that:

- a nurse can offer a shift and get it covered with under a minute of effort
- a manager can review and approve a swap without opening another tool

Clickable prototype only. No backend.

4. Users

- **Nurse:** works rotating shifts, mostly on their phone between tasks. Offers shifts and accepts swaps from colleagues.
- **Ward manager:** approves or rejects swaps from a desktop in the ward office. Needs to see overtime risk before approving.

5. Core journeys

1. **Nurse offers a shift:** sees their schedule → picks a shift → chooses a colleague who is free → reviews and sends → sees “Waiting for colleague”.
2. **Nurse accepts a swap:** sees a swap request on their schedule → opens it → accepts → sees “Waiting for manager approval”.
3. **Manager approves a swap:** sees the pending approvals list → opens a swap → approves, or rejects with a reason → sees the list update.

The nurse's schedule is the same screen in journeys 1 and 2.

6. Requirements

- The schedule shows the next 14 days: shift type (Early, Late, Night), ward, and hours.
- Only colleagues with the same grade and no shift at that time can be chosen.
- A request can be cancelled until the colleague accepts. Cancelling needs a confirmation.
- For each swap the manager sees both nurses, the shift, and a warning if the swap takes someone over 48 hours in 7 days.
- Rejecting requires a reason (free text, required).

- Statuses: Waiting for colleague → Waiting for approval → Approved / Rejected / Cancelled.

7. States reviewers must open directly

- No colleagues available for the selected shift.
- Cancel request confirmation.
- Manager: a swap that breaks the 48-hour rule (warning shown).
- Manager: no pending approvals.

8. Design

- Use our Memorisely design system (mid-fidelity). Light mode only.
- Nurse screens are phone-first. Manager screens are desktop.

9. Out of scope

Login, push notifications, calendar sync, payroll, nurses working on more than one ward, admin settings.

10. References

Deputy (shift view), Linear (density of the approvals list).
